SAKSHAM SHARMA

Pune, Maharashtra, India | sakshamamitsharma@gmail.com | github.com/sammy-master | linkedin.com/in/saksham-sharma-14sept | Portfolio

EDUCATION

Pimpri Chinchwad University **Pune, Maharashtra, India**

Bachelor of Technology in Computer Science and Engineering *Expected 2028*

- Relevant Coursework: Object-Oriented Programming, Advanced Data Structures & Algorithms, Database Management Systems, Full-Stack Web Development, Computer Networks, Operating Systems

TECHNICAL SKILLS

Languages: C++, Python, Java, C, SQL, JavaScript, TypeScript
Web Technologies: HTML5, CSS3, React, Next.js, Tailwind CSS
Frameworks & Libraries: Flask, Django, Discord.py, Framer Motion, Spline 3D, Tkinter
Databases & Backend: MySQL, SQLite, Django ORM, REST APIs, Serverless Architecture (Vercel)
Tools & Platforms: Git, GitHub, VS Code, Figma, Vercel, Linux/RHEL, LaTeX/Overleaf, OpenShift
CS Foundations: Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, Cybersecurity Fundamentals

EXPERIENCE

Engineering Intern **2025**

Bosch *Pune, India*

- Completed a hands-on engineering internship, gaining real-world industry exposure within a professional engineering environment
- Collaborated with engineers, observed production systems, and applied classroom computer science concepts in a practical industrial setting

Discord Community Builder & Bot Developer **2024 – Present**

Self-Initiated *Remote*

- Built and managed multiple Discord communities with hundreds of active members
- Developed and integrated custom Python bots using Discord.py to automate workflows and organize community events
- Strengthened leadership, communication, and community management skills through sustained community growth

PROJECTS

AlgoVision V2 | *JavaScript, Python, Flask, C++, Tailwind CSS*

- Built an interactive, animated algorithm visualization platform covering sorting, searching, and linear data structures
- Engineered a Python/Flask serverless backend interfacing with a custom C++ algorithm engine, deployed on Vercel
- Designed stateful interactive playgrounds for stacks, queues, singly linked lists, and infix-to-postfix parsing

JavaVision | *Java, JavaScript, Python, Flask, Tailwind CSS*

- Developed an interactive web platform for exploring and executing Java programs via a custom Universal Terminal Simulator
- Built a custom JavaScript terminal that evaluates logic, simulates networking, and renders GUI windows in-browser
- Implemented a Flask serverless backend enabling dynamic code execution for OOP, exception handling, and file I/O topics

PyVision | *Python, Flask, JavaScript, Tailwind CSS*

- Created a web-based Python code execution and Jupyter Notebook explorer with a native `.ipynb` parser
- Built a custom subprocess engine streaming live output to an integrated virtual terminal with a glassmorphic UI

VisCrypt | *Python, Tkinter, Cryptography, Image Processing*

- Built a visual cryptography security utility that encrypts images into noise shares, decipherable only when overlaid
- Implemented threshold cryptographic schemes with pixel-level matrix manipulation and a zero-decryption-key design

Exotica PCMC | *Next.js, React, Tailwind CSS, Framer Motion*

- Developed a production-grade business website with server-side rendering for improved SEO and load performance
- Implemented Framer Motion micro-interactions and a fully responsive UI with an automated Vercel deployment pipeline

Additional Projects: SVJ – 3D Web Experience (React, Spline 3D), ExactMatch Replace (JavaScript productivity tool), Typing Samurai (Flask speed trainer), Hostel Management DBMS Portal (Python, SQL), Arcade Hub (vanilla JS games), Personal Portfolio (React, TypeScript) – full list at github.com/sammy-master

CERTIFICATIONS

Google Cybersecurity Professional Certificate: Coursera (Google), 2025 – 8-course specialization: security frameworks, network security, Linux & SQL, SIEM tools, and Python automation for security analysts

Operating Systems Specialization: Coursera, 2025 – 5-course specialization: processes & scheduling, concurrency, memory management, persistence, and virtualization

Python for Everybody: Coursera (University of Michigan), 2025 – 4-course specialization: Python fundamentals, data structures, web data & APIs, and databases

Meta Web Development Professional Certificate: Coursera (Meta), 2025 – 4-course specialization: front-end development, Git & GitHub, Django, and full-stack development with Django & React

Red Hat Linux & OpenShift: Red Hat, 2025 – 4-course track: Linux fundamentals, RHEL system administration I & II, and containerized applications on OpenShift/Kubernetes

Additional Certifications: Programming with C++, Java for Beginners, Write Smarter with Overleaf & LaTeX (Coursera, 2025); QC IUCEE Quantum Certificate (IUCEE, 2025)

ACHIEVEMENTS & LEADERSHIP

Smart India Hackathon 2026 – Selected to represent Pimpri Chinchwad University at India's national-level open innovation hackathon (Government of India, Ministry of Education); advanced to the national round among the top shortlisted teams
Competitive Programming – Actively practicing Data Structures & Algorithms in C++, spanning arrays, linked lists, stacks, queues, trees, and sorting/searching algorithms
Community Leadership – Founded and grew multiple Discord communities to hundreds of active members, organizing events and moderating engagement
